Electrical

AC Corporation's Electrical Division is comprised of experienced professionals who continually strive to exceed the expectations of the client. We are staffed to service both the design/build and plan-specification markets.

Quality is the constant focus. Our professional engineers begin the quality process during the conceptual phase while collaborating with architects, owners, developers and general contractors to insure the most effective and innovative methods and materials are utilized.

Our seasoned team of estimators and project managers continue the quality process while focusing on controlling cost. We are able to accomplish this task through precise coordination of construction schedules, material procurement, and timely delivery.

The construction phase is completed by our experienced highly skilled craftsmen again utilizing total quality management to insure a finished product that exceeds the clients expectations.

Cost Control

Cost control begins prior to construction in the preliminary budgeting phase and continues throughout the duration of the project.
